PROFESSIONAL SUMMARY

Aviation Analytics, Data Science and Commercial Strategy professional with **5+ years of experience** across airline network planning, revenue management, cargo analytics, demand forecasting, capacity optimization, route performance, business intelligence and advanced analytics. Experienced in analysing **2M-3M+ operational, passenger, commercial and scheduling records** using Python, SQL, R, Power BI, Tableau, Microsoft Fabric and Advanced Excel. Proven ability to translate complex business questions into forecasting models, scenario analysis, KPI frameworks, automated decision-support solutions and actionable recommendations that improve network performance, revenue visibility, operational efficiency and executive decision-making.

CORE COMPETENCIES

Network Planning | Revenue Management | Aviation Analytics | Data Science | Business Intelligence | Commercial Analytics | Demand Forecasting | Predictive Analytics | Statistical Modelling | Capacity Optimization | Revenue Optimization | Route Performance Analysis | Schedule Planning | Scenario Modelling | Network Optimization | Cargo Analytics | Partnership Analytics | Strategic Alliances | KPI Development | Data Modelling | Data Quality | Process Automation | Stakeholder Management | Business Case Analysis | Data Storytelling | Continuous Improvement

PROFESSIONAL EXPERIENCE

Jambojet - Network Planning & Analytics Specialist / Network Data Scientist

Nairobi, Kenya | Dec 2023 - Present

- Analyse **3M+ passenger, booking, scheduling, operational and commercial records annually** to identify demand patterns, network opportunities, capacity constraints, route performance drivers and revenue improvement opportunities.
- Develop demand forecasting, predictive and scenario models supporting capacity allocation, frequency optimization, schedule adjustments, route development, seasonal planning and commercial decision-making.
- Evaluate booking trends, passenger demand, load factors, aircraft utilization, RASK, route profitability, schedule performance and operational reliability to support network and revenue optimization.
- Develop automated Power BI dashboards, KPI frameworks and analytical workflows, reducing reporting turnaround time by **40%+** and strengthening visibility of network, commercial and operational performance.
- Partner with Revenue Management, Commercial, Finance, Operations, Engineering and senior stakeholders to translate complex analytical findings into business cases, network actions and measurable recommendations.
- Apply Python, SQL, R, Microsoft Fabric and Advanced Excel to data preparation, modelling, validation, automation, statistical analysis and self-service business intelligence.

Astral Aviation Ltd - Data Analyst

Nairobi, Kenya | Sep 2021 - Nov 2023

- Analysed **2M+ cargo, shipment, operational and commercial records** covering demand, shipment flows, load factors, capacity utilization, route performance, customer activity and operational KPIs.
- Developed forecasting and analytical solutions supporting cargo capacity planning, network optimization, commercial strategy, business development and resource allocation.
- Automated reporting and data-processing workflows using SQL, R, Tableau, Power BI and Excel, improving reporting efficiency by **35%** and reducing repetitive manual analysis.
- Strengthened management reporting through structured data validation, reconciliation, transformation and quality controls, improving the reliability and usability of business information.
- Partnered with Commercial, Operations, Finance and Ground Operations teams to identify performance gaps, capacity opportunities, cost drivers and revenue improvement initiatives.

CAREER IMPACT & ANALYTICAL SCOPE

- **Network & Revenue:** Demand forecasting, network development, capacity deployment, schedule optimization, load factor analysis, RASK, route profitability, passenger flows, connectivity analysis, alliance/partnership opportunity assessment and commercial performance.
- **Advanced Analytics:** Predictive analytics, statistical modelling, time-series forecasting, scenario analysis, hypothesis-driven analysis, feature engineering concepts, machine learning concepts, optimization and AI-assisted analytics.
- **Operational Analytics:** On-time performance, aircraft utilization, schedule reliability, operational KPIs, automated performance monitoring and management reporting.
- **Data & BI:** Data extraction, transformation, modelling, validation, KPI definition, dashboard development, self-service analytics, data quality, data storytelling and executive reporting.
- **Cross-functional Delivery:** Collaboration across Revenue Management, Network Planning, Commercial, Finance, Operations, Engineering, Ground Operations and executive stakeholders.

TECHNICAL SKILLS

Programming & Analysis: Python | SQL | R | Pandas | NumPy concepts | Statistical Analysis | Predictive Analytics | Time-Series Forecasting

Business Intelligence: Power BI | Tableau | Advanced Excel | Power Query | DAX | KPI Frameworks | Data Visualization | Dashboard Development

Data & Cloud: Microsoft Fabric | Azure concepts | ETL/ELT | Data Modelling | Data Warehousing | Data Lakes | REST APIs | Data Quality | Data Governance concepts

Aviation & Commercial: Network Planning | Revenue Management | Demand Forecasting | Capacity Planning | Revenue Optimization | Route Performance | RASK | Load Factor | Yield Analysis | Schedule Analysis | Aircraft Utilization | Cargo Analytics | Strategic Alliances

Automation & AI: Power Automate | Analytics Automation | ChatGPT | Microsoft Copilot | AI-Assisted Analytics | Machine Learning concepts | Prompt Engineering concepts

Business & Delivery: Stakeholder Management | Business Requirements | Business Case Analysis | Executive Reporting | Data Storytelling | Strategic Analysis | Cross-functional Collaboration | Continuous Improvement | Agile concepts

EDUCATION

Bachelor of Applied Science in Statistics

Mount Kenya University | Kenya

Relevant foundation: Statistical Analysis | Probability | Regression | Forecasting | Data Analysis | Mathematical Modelling

LICENSES & CERTIFICATIONS

- IATA Network, Fleet & Schedule Planning
- Google Data Analytics Professional Certificate
- Microsoft Fabric Analyst in a Day

ADDITIONAL INFORMATION

Professional Focus: Aviation analytics, data science, network planning, revenue management, business intelligence and commercial strategy.

Mobility: Open to international opportunities, relocation and business travel.
